Star2Star's award-winning technology employs our unique Blended Architecture to overcome the reliability, quality, and security limitations of other unified communications technologies. Star2Star has achieved 100% uptime for three straight years and was named to both the Inc. 500|5000 and Forbes Most Promising Companies lists. StarSystems are currently revolutionizing communications at thousands of companies throughout North America.

What We Do

Our security features such as StarGuard SecureVoice protect sensitive data and help to meet regulatory and other guidelines.

- We deliver a complete end-to-end secure business communications solution that combines best-in-class hardware with a suite of ultra-reliable cloud-based unified communications services, including chat, video, and fax.
- We reduce costs by up to 50% and improve business operating efficiency.
- We improve call quality with our state-of-the-art Constellation Network.
- We Reduce the need for separate cabling at most locations by combining voice and data traffic over a single IP network.
- Our nationwide network of installation partners and our Implementation Services team can deploy standard or customized customer solutions on any scale and ensure all customer needs are met.
